Introduction

- Data Analytics is the systematic process of modeling data with the goal of discovering useful insights that can be used to make well-informed business decisions. The core Data Analytics Lifecycle includes; data discovery, **modeling** and visualization.

- A Data Analyst is an industry professional who studies and identifies data trends to improve the core business processes of an organization. A Data Analyst technical skillset includes; database design and administration, knowledge of math and statistics, and use of business intelligence (BI) tools.

- At the end of this training, students should be able to utilize data analytics tools to proffer data-driver solutions to organizations.
